

2 July 1962

MEMO TO THE FILE

FROM :

25X1A9a

SUBJECT: Meeting of Radiation Countermeasures Committee -
Items of Interest to OC-E Regarding Personnel
Requirements.

ATTENDANCE:

25X1A9a

1. Shield Room Installation

Mr. [REDACTED] pointed out that purchase of shield rooms is being planned for FY-63. This will necessitate use of Agency personnel for most installations. Concurrence was that installation personnel and training would probably fall under the cognizance of OC-E while on-site testing more than likely would be an OC-SP requirement. The first installation should be [REDACTED] possible sometime in October 1962 and [REDACTED] require OC-E installers. In some instances, the State Department [REDACTED]

[REDACTED] training begin as soon as possible.

2. Shield Room Budget

OC-S has programmed for Crypto center shield rooms for FY-63; however, they have not programmed for shield rooms [REDACTED] which would be of a special nature, such as the MAX-1 for [REDACTED] and etc. At this time it appears that OC-E will be responsible to provide funds for such special requirements.

3. Tech to Install 2 Teletype Keyers

In July we should receive 2 of the latest versions of the Teletype Keyers for use with M-28 ASR sets. It has been requested that when received, a wire technician install per outlined modifications sent with each kit. It is suggested by the undersigned that two ASR sets (single contact types) be drawn from stock for this purpose. When modified, one

unit should go to the R&D Lab for Radiation tests, the other
25X1A2d1 to Langley for operational tests (possibly installed in the
[redacted] Center on a good and active KW-26 circuit might give
it a good test).
